IN THE CLAIMS

This listing of claims will replace all prior versions, and listings, of claims in the application. An identifier indicating the status of each claim is provided.

Listing of Claims

1-8. (Canceled)

9. (Currently Amended) A portable memory device comprising:

a terminal capable of being connected to an interface mounted on a host machine and capable of data input/output from/to said host machine, and

a storage element for storing data which include:

at least one of image data and audio data,

reproduction program data for said host machine to reproduce at least one

of said image data and audio data,

execution program data for said host machine to execute said reproduction

program using said reproduction program data and a writing program <u>having GUI function</u> to write at least one of said image data and audio data from said host machine to said storage

element in response to a detection signal indicating that said host machine detects a connection

of said terminal to said interface;

driver program data for operating the portable memory device on the host

machine; and

U.S. Appln. No. 10/566,871 Reply to Non-Final Office Action dated August 3, 2010 Attorney Docket No. 450100-05211

install program data for installing the reproduction program data, the

execution program data and the driver program data,

wherein, when the host machine does not store the reproduction program

data, the execution program data and the driver program data, the install program data

automatically installs the reproduction program data, the execution program data and the driver

program data on the host machine in response to connecting the portable memory device to the

host machine.

wherein when at least one of the reproduction program data and the

execution program data is installed in the host machine and the portable memory device is

connected to the host machine, the host machine writes at least one of said image data and audio

data using the writing program and outputs the writing program having GUI function, the

reproduction program data and the execution program data to the portable memory device, and

wherein at least one of the image data and audio data to be reproduced is

selected via the host machine by a user, the selected data being not changed by the user.

10. (Previously Presented) The portable memory device as described in claim 9,

wherein the host machine can activate said execution program in response to said detection

signal to read and reproduce at least one of said image data and audio data stored in said memory

element, when said host machine previously stores at least said reproduction program data and

execution program data, and

when said terminal is connected to said interface in the state that said storage

clement stores at least one of said image data and audio data.

PATENT

U.S. Appln. No. 10/566,871 PATENT
Reply to Non-Final Office Action dated August 3, 2010 Attorney Docket No. 450100-05211

(Currently Amended) A recording medium for storing a computer-executable

program, the program having program code comprising:

a detecting step of detecting a detection signal indicating that a terminal of a

portable memory device is connected to said an interface mounted on a host machine;

an executing step of executing a program in a reproduction program data for

reproducing at least one of image data and audio data stored in said memory device, in response

to said detection signal; and

a writing step to write-of writing, using a writing program having GUI function, at

least one of said image data and audio data from a host machine to said storage element,

an installing step of installing the reproduction program data and the driver

program data, the driver program data being used for operating the portable memory device on

the host machine;

wherein, when the host machine does not store the reproduction program data, the

execution program data and the driver program data, the installing step automatically installs the

reproduction program data, the execution program data and the driver program data on the host

machine in response to connecting the portable memory device to the host machine,

wherein when at least one of the reproduction program data and the execution

program data is installed in the host machine and the portable memory device is connected to the

host machine, the host machine writes at least one of said image data and audio data using the

writing program and outputs the writing program having GUI function, the reproduction program

data and the execution program data to the portable memory device, and

via the host machine by a user, the selected data being not changed by the user.

12. (Previously Presented) The recording medium as described in claim 11,

wherein the program has program code comprising:

an outputting step of outputting at least one of said image data and audio data to

said portable memory device; and

a controlling step of controlling to output said reproduction program data and

said execution program data to said portable memory device at the same time as, during or after

the outputting step.

13. (Currently Amended) A data processing system comprising:

a host machine having an interface capable of data input/output, and

a portable memory device comprising:

a terminal capable of being connected to said interface, and

a storage element for storing at least one of image data and audio data,

reproduction program data for said host machine to reproduce at least one of said image data and

audio data, execution program data for said host machine to execute a program using said

reproduction program data in response to a detection signal indicating that said host machine

detects a connection of said terminal to said interface, a writing program having GUI function to

write at least one of said image data and audio data from said host machine to said storage

element, driver program data for operating the portable memory device on the host machine; and

PATENT Attorney Docket No. 450100-05211

U.S. Appln. No. 10/566,871 Reply to Non-Final Office Action dated August 3, 2010

install program data for installing the reproduction program data, the execution program data and

the driver program data,

wherein, when the host machine does not store the reproduction program

data, the execution program data and the driver program data, the install program data

automatically installs the reproduction program data, the execution program data and the driver

program data on the host machine in response to connecting the portable memory device to the

host machine.

wherein when at least one of the reproduction program data and the

execution program data is installed in the host machine and the portable memory device is

connected to the host machine, the host machine writes at least one of said image data and audio

data using the writing program and outputs the writing program having GUI function, the

reproduction program data and the execution program data to the portable memory device, and

wherein at least one of the image data and audio data to be reproduced is

selected via the host machine by a user, the selected data being not changed by the user.

14. (Previously Presented) The data processing system as described in claim 13,

said system further comprising an external apparatus connected to said host machine via a

network.

wherein said host machine comprises a means for controlling to activate said

execution program in response to said connection detection signal and outputting via said

network at least one of said image data and audio data to said external apparatus designated by a
